

Dear Families,

As summer approaches, we are all looking forward to spending time with family and friends. Our goal is to help our students find the right balance between enjoying vacation and dedicating time to keeping their reading and math skills sharp.

We are providing you with reading and math resources that students can use at home to prepare for the next school year. While these resources are optional, we encourage students to take full advantage and return them in the fall to be recognized for work well done!

### **Students Entering Grades 1-4 Reading**

Students may choose one or all of the following:

- grade specific bingo boards from Lexia
- reading log to list titles read
- Lexia, iReady (entering grades 3-8)

### **Students Entering Grade 5 Reading**

Resources:

- [Summer Learning Webpage](#) (Found on the HPS website)

### **Students Entering Grades 1-5 Mathematics**

You will find a Mathematics Calendar full of fun-filled activities that will strengthen your child's math skills and promote mathematical reasoning. Working on these activities along with iReady will prepare your child for a great year in the fall.

In order to create options that motivate students as well as to maintain a strong home-school connection, we have created a [Summer Learning Webpage](#) that contains math and reading activities, apps, websites, and grade-specific book choices. This link is also available on our HPS website.

We hope that amid your summer break, you might also spend some time with your child exploring new books and playing some fun math games. We encourage you to continue to include reading as an activity that is part of your daily routine.

Have a well-deserved summer break and thank you for your support!

*-Hanover Instructional Support Team*
